Getting started — signing in

Login Name, not an email

Every account uses a Login Name your administrator set up — not a real email address (existing accounts made before this change still sign in with their old email, which still works).

First time on a device

Needs an internet connection once. After that, the app keeps working offline — Firestore syncs your changes automatically once you're back online.

Forgot your password?

There's no email reset link. Ask your administrator to set you up with a new password from Team — or change it yourself anytime from the sidebar once you're signed in.

Show/hide password

A small eye icon next to the password field on sign-in lets you reveal what you've typed before submitting.

Leads

Where a prospect starts before they're a real customer. Track status and rating here; nothing downstream (Inquiries, Quotations) can be built against a Lead — it has to become a Customer first.

LEADS & CUSTOMERS

New lead

Company

Contact person

Job title

Email

Phone

Status

New ▼

Rating

Hot ▼

Convert button: appears only once a lead's Status is set to *Qualified*. Converting creates a real Customer (and Contact) record, and the lead is marked handled — it isn't deleted, just no longer part of your active list.

If this, then that

IF Status is not Qualified	THEN No Convert button shows on the lead — you can still edit every other field.
IF Status becomes Qualified	THEN A Convert button appears, on both the list row and the detail view.
IF You convert a Qualified lead	THEN A Customer (Account) and Contact are created from the lead's info; the lead itself stays in the system, just marked converted — nothing is deleted.
IF Status is anything other than Qualified	THEN The lead cannot be converted, even by an admin.

Field reference

Field	Type	Status
Company	Text	Required
Contact person	Text	Required
Job title	Text	Optional
Email	Email	Optional
Phone	Phone	Optional
Status	Dropdown — New, Contacted, Engaged, Qualified, Unresponsive	Optional
Rating	Dropdown — Hot, Warm, Cold	Optional
Source	Dropdown	Optional
Lead Requirements	Dropdown — No Special Requirement, Need Accreditation, PO First, Accreditation + PO First	Optional
Owner	Person/record picker	Optional
Notes	Long text	Optional

Customers

The shared customer registry — every department sees the same company record. **Sales Person** is a name tag only (not a login) used to track whose book of business a customer belongs to; it's what carries through to Inquiries, Costing, and Quotations automatically.

LEADS & CUSTOMERS

New account

Company name

Industry

construction

Account Status

Prospect

Sales Person

Owner

Account manager

Documents

If this, then that

IF Sales Person is set on this customer	THEN Every Inquiry, Costing sheet, and Quotation created against this customer auto-copies that name — nobody re-types it.
IF Sales Person is left blank	THEN New Inquiries against this customer show "Not set on this customer — add one from Customers" instead of a name.
IF You are Procurement Officer or Sales Operations Specialist	THEN You can edit any Sales-department customer's record, not only ones you personally created.
IF You write only to "Your department's notes"	THEN The edit goes through even if you otherwise couldn't edit the record — every department can always add its own private notes.

Field reference

Field	Type	Status
Company name	Text	Required
Contact person	Text	Optional
Industry	Dropdown	Optional
Account Status	Dropdown — Active, Developing, Prospect, On Hold, Inactive, Dormant...	Optional

Account manager	Person/record picker	Optional
Sales Person	Dropdown	Optional
Documents	Multi-line link list	Optional
Shared notes	Long text	Optional
Your department's notes	Long text (visible only to your department)	Optional

Contacts

People at a customer, linked to their Account. Visibility is narrower than Accounts — only the contact's owner, the account manager, a manager over that department, or an admin can see a given contact.

LEADS & CUSTOMERS

New contact

Full name

Job title

Email

Phone

Account

If this, then that

IF You own or created the contact	THEN You can see and edit it.
IF You're the Account Manager on the parent Customer record	THEN You can see and edit every contact under that customer, even ones you didn't create.
IF You're a Manager/Supervisor over that department	THEN You can see and edit it, department-wide.
IF None of the above, and you're not admin	THEN The contact doesn't appear to you at all — not even in search.

Field reference

Field	Type	Status
Name	Text	Required
Last name	Text	Required
Account	Person/record picker	Optional
Job title	Text	Optional
Email	Email	Optional
Phone	Phone	Optional
Mobile	Phone	Optional
Owner	Person/record picker	Optional
Notes	Long text	Optional

Customer / Lead Inquiry

The starting point of a sale — logging what a customer is asking about, and canvassing suppliers against it. Auto-generates a Control No. (e.g. CN-BD-2026-09-00001) that follows the record all the way to Costing and Quotation.

SALES & QUOTATION MANAGEMENT

New inquiry

Subject

Inquiry from

Lead / Customer

Account

Sales Person

Contact person

Inquiry date

Owner

Item list & suppliers: each inquiry carries its own canvass sheet — item lines (brand, model, multi-line description, qty) and up to several supplier comparison cards (name, lead time, shipping cost, quoted price per item). This lives on the Inquiry itself, not as separate records.

If this, then that

IF Inquiry from is set to Account	THEN The Sales Person field auto-fills from that customer's record, live, before you even save.
IF Inquiry from is set to Lead	THEN Sales Person shows "Set once this lead becomes a Customer" — Leads don't carry a Sales Person tag.
IF The linked customer has no Sales Person set	THEN Sales Person shows "Not set on this customer — add one from Customers" instead of a blank.
IF You pick a Customer	THEN The Contact person dropdown auto-filters to only that customer's contacts.
IF You mark a supplier as the winner for an item	THEN That supplier's name and quoted price carry forward automatically into Costing when you proceed.
IF You are Procurement Officer or Sales Operations Specialist	THEN You see and can edit every Sales-department inquiry, not only ones you created.

Field reference

Field	Type	Status
Subject	Text	Required
Inquiry from	Dropdown — Lead, Account	Optional
Lead / Customer	Person/record picker	Optional
Contact person	Person/record picker	Optional
Inquiry date	Date	Optional
Status	Dropdown — Open, For Sourced Out, Canvassed, Proceed Costing, No Quote	Optional
Owner	Person/record picker	Optional
Sales Person	Text	System-tracked
Notes	Long text	Optional

Product Costing

One costing sheet per winning supplier, pulling items straight from the Inquiry. Works out landed cost, markup, and the resulting selling price — this is where actual profitability gets decided before a Quotation goes out.

SALES & QUOTATION MANAGEMENT

New product costing

Customer

Supplier

+ Select supplier +

Purchase type

Local — bought here

GP %

Selling price

Supplier field: always picks an actual record from the Suppliers catalog — never free-typed. Choosing "+ Add new supplier..." creates that catalog record on the spot, or links to an existing one automatically if the name already matches.

Approval: moving status to Approved or Rejected is a Manager/Admin-only action — the person who built the sheet can submit it, but can't sign off on their own numbers.

If this, then that

IF You type a supplier name that already exists in the catalog	THEN That existing record is linked automatically — no duplicate is created, even if you clicked "+ Add new supplier..."
IF You type a genuinely new supplier name	THEN A new Suppliers-catalog record is created the moment you save, and this costing sheet links to it.
IF You pick an existing supplier from the dropdown	THEN Contact person, email, and payment terms auto-fill from the catalog — only into fields that are still empty, never overwriting something you already typed.
IF You try to move Status to Approved or Rejected	THEN Only a Manager or Admin can complete this — a Sales Operations Specialist or Officer can submit the sheet, but not approve their own.
IF Currency is changed to something other than Local	THEN The FX rate field pre-fills from Settings' default rate, if one exists and the rate field is still blank.

Quotations

The priced document that actually goes to the customer. Quote numbers follow a fixed department series (e.g. MTISI-05-0926-001) and are issued once, permanently, when the record is first saved.

SALES & QUOTATION MANAGEMENT

New quotation

Quote no.

VAT / tax (%)

Approve / Decline: Manager, Admin, or specifically the *Sales Operations Specialist* role can move a quotation to Approved or Declined — approving automatically moves the linked Opportunity to Won and creates a Sales Order in Processing.

If this, then that

IF Status moves to Approved	THEN The linked Opportunity moves to Won automatically, and a Convert-to-Sales-Order button becomes available to the quotation's owner (or admin).
IF You are a Sales Operations Specialist	THEN You can Approve/Decline a quotation yourself — the one exception among staff-tier roles. You still cannot Approve/Reject the related Costing sheet.
IF You are Procurement Officer, BD Officer, or Marketing Officer	THEN You cannot Approve or Decline — only Draft, Sent, Viewed, and Expired are available to you.
IF The quote number has already been issued	THEN It's fixed for the life of the record — even an admin editing the quotation can't change it.
IF A colleague saves a quotation moments before you	THEN You automatically get the next number in the series, not a clash — numbers are reserved atomically.

Field reference

Field	Type	Status
Quote no.	Text	Required
Quote Rev.	Number	Optional
Costing Rev.	Number	Optional
Subject	Text	Required

Follow-ups

Reminders and notes tied to a Quotation, Lead, or Account — shows up on Calendar automatically once saved.

SALES & QUOTATION MANAGEMENT

New follow-up

Subject

Related to

Follow-up date

Quotation

Owner

If this, then that

IF Related to is set to Account, and that customer has a Sales Person	THEN The follow-up auto-tags that Sales Person, same as Inquiries do.
IF You save a follow-up with a date	THEN It appears on Calendar automatically — no separate step needed.

Field reference

Field	Type	Status
Subject	Text	Required
Related to	Dropdown — Quotation, Lead, Account	Optional
Record	Person/record picker	Optional
Follow up on	Date	Optional
Status	Dropdown — Pending, Done	Optional
Owner	Person/record picker	Optional
Notes	Long text	Optional

Sales Orders

The record of what's actually being fulfilled, created only by converting an Approved Quotation. Carries a frozen snapshot of items, winning suppliers, and billing info exactly as they were at the moment of conversion.

SALES ORDERS

Convert to Sales Order

Billed to (from Quotation)

PO number

PO date

Status

processing ▼

Nothing is auto-created anymore: Sales Orders only come from the Convert button on an Approved Quotation — and only the quotation's own owner (or an admin) sees that button, regardless of manager/supervisor/officer role. Converting opens a full preview (Billed to, Inquiry items with winning supplier, Costing per supplier, Customer PO) before anything is actually created.

Customer PO is required: the PO number must be filled in before the Convert button will go through. A "📁 Open destination folder" link (configured in Settings) is shown right above it for uploading the actual PO document to Drive — the CRM doesn't store the file itself.

If this, then that

IF Quotation Status is Approved, and you own it	THEN A Convert button shows — on the Quotations list row and inside the quotation's own detail view.
IF Quotation Status is Approved, but you don't own it	THEN No Convert button — not even for a Manager, Supervisor, or Officer. Admin is the one exception and sees it regardless of ownership.
IF A Sales Order already exists for this quotation	THEN The Convert button disappears — converting the same quotation twice isn't possible.
IF You delete that Sales Order afterward	THEN The Convert button reappears on the original quotation — nothing about "already converted" is permanently stamped.
IF PO number is left empty	THEN Clicking "Convert to Sales Order" does nothing except prompt you to fill it in first.
IF A linked Inquiry can't be found by Control No.	THEN The preview still works — it just skips the "Inquiry items & winning supplier" section and says so plainly.
IF No Approved Costing sheet shares the same Control No.	THEN The "Costing per supplier" section shows a note instead of supplier cards, but conversion still proceeds.

Field reference

Field	Type	Status
Order no.	Text	Required
Customer	Person/record picker	Optional
Quotation	Person/record picker	Optional
Opportunity	Person/record picker	Optional
Order date	Date	Optional
Customer PO no.	Text	Optional
PO date	Date	Optional

Status	Dropdown — Processing, Ready for delivery, Delivered, Invoiced, Cancelled	Optional
Owner	Person/record picker	Optional
Notes	Long text	Optional

Suppliers

The shared supplier directory — auto-populated from canvassing, or added manually. Costing always links to an actual record here, never a free-typed name.

CATALOG

Complete supplier information

Registered Company Name

Contact person

Position

Supplier Type

Manufacturer

☒ SEC/DTI Registration — Confirmed uploaded

☐ BIR Form 2303 — Confirmed uploaded

Compliance documents don't store files or links. Each of the six document fields is just a checkbox — "Confirmed uploaded" — plus a "📁 Open destination folder" shortcut to where the actual file should be placed in Drive. Nothing about the file itself (name, link) is saved in the CRM. A supplier only shows "✓ Complete" once every required box is checked and every required contact field is filled in.

If this, then that

IF Every required field is filled in, and every required document box is checked	THEN The supplier shows a "✓ Complete" badge.
IF Any required field or document box is still missing	THEN The supplier shows "⚠ Incomplete" — Authorized Distributor Certificate is the one document that's never required, since it only applies to some suppliers.
IF A destination folder link isn't set up in Settings for a document type	THEN That document's "📁 Open destination folder" hint just doesn't show — the checkbox still works fine on its own.
IF You type a name in Costing's "+ Add new supplier" that matches an existing supplier	THEN It links to that existing record — you'll see a live warning under the name field before you even save.

Field reference

Field	Type	Status
Registered Company Name	Text	Required

My Tasks

A personal to-do list, scoped to what's assigned to you. The default tab, Prospective Tasks, shows everything still open, sorted by due date.

SALES ACTIVITIES

New task

Task Title

Related to

Account

Priority

Low

Due Date

Task Status

New

Status flow: New → Ongoing → Rescheduled → Completed, changeable right from the list view. Marking a task Completed always opens a small popup requiring an Outcome and Outcome Notes first — it can't be skipped.

Auto-populated: Calendar and the Prospective Tasks list fill in automatically from due dates on Inquiries, Quotations, Costing approvals, and Follow-ups — most tasks you see were never typed in by hand.

If this, then that

IF You set Status to Completed	THEN A popup requires Outcome and Outcome Notes before it'll save — there's no way to mark a task done without them.
IF You set Status to Rescheduled	THEN The task saves immediately, then reopens for editing with a clean, simplified field set — same as creating a brand-new task.
IF A Quotation, Inquiry, Costing approval, or Follow-up has a date	THEN It shows up on Calendar and possibly your task list automatically — without anyone manually creating a task for it.

Field reference

Field	Type	Status
Task Title	Text	Required
Activity Type	Dropdown — Call, Meeting, Email, Task, Site Visit, Demo...	Optional
Related to	Dropdown — Lead, Account, Contact, Deal	Optional
Related Customer / Lead	Person/record picker	Optional

Related Quotation	Person/record picker	Optional
Assigned To	Person/record picker	Optional
Priority	Dropdown — Low, Normal, High, Urgent	Optional
Due Date	Date	Optional
Due Time	Time	Optional
Task Status	Dropdown — New, Ongoing, Rescheduled, Completed	Optional
Outcome	Dropdown — —, Successful, No Answer, Rescheduled, Not Interested, Needs Follow-up...	Optional
Next Action	Text	Optional

Calendar

A month view built entirely from other records' dates — Task due dates, Inquiry dates, Quotation issue dates, Follow-up dates, and Costing approval dates. There's nothing to fill in here directly; click any entry to jump straight to that record.

Entry color	Comes from
Task	My Tasks due date
Inquiry	Inquiry date
Quotation	Issued date
Follow-up	Follow-up date
Costing	Approved date (only once Approved)

If this, then that

IF A Costing sheet has not yet been Approved	THEN It does not appear on Calendar at all — only Approved costing shows up, dated by its approval.
IF You click any Calendar entry	THEN It opens straight to that record's own detail view — Calendar itself has nothing to edit.

Reports

A printable, letterhead-formatted document generator — not a dashboard. Pick a report type and a date range, then generate a preview you can print or save as PDF.

From

To

Team

Where every account gets created — nobody signs themselves up. Admin sets a person's **Login Name** (not an email) and a temporary password here.

ADMINISTRATION

Add person

Full name

Login Name

Temporary password

Role

Procurement Manager

Department

Active

Active

Forgotten password: there's no email-based reset — Login Names aren't real email addresses. Admin deactivates the account and adds the person again with the same Login Name and a new password. Anyone can also change their own password anytime from the sidebar once signed in.

If this, then that

IF Someone's account was created before Login Names existed	THEN Their real email still works exactly as before — typing an "@" in the Login Name field is detected automatically and used as-is.
IF A new Login Name is typed with an "@" in it	THEN It's treated as a literal email, same backward-compatible behavior — not appended with any internal domain.
IF Role is Procurement Manager or Supervisor	THEN Full access across their whole department, plus approval rights on Costing and Quotations.
IF Role is Procurement Officer or Sales Operations Specialist	THEN Broad visibility on Sales-department Inquiries, Costing, Quotations, and Follow-ups — but no approval rights, and no access outside those modules.
IF Role is Admin	THEN Sees and can act on every department's records, but the "New" button is hidden everywhere — admin monitors and approves, not creates.

Activity History

A single chronological feed of Created, Updated, Approved, Rejected, and Declined events across every module in the CRM — built entirely from data already on each record, no separate logging system. Every timestamp shows in Philippine time (GMT+8).

Filter	Narrows by
Everyone / a specific person	Who performed the action
All modules / one module	Which part of the CRM
All actions / one action	Created, Updated, Approved, Rejected, Declined

If this, then that

IF A record was edited before this feature existed	THEN It shows Created correctly, but no "Updated" entry — that attribution only started being tracked from this point forward.
IF A record was edited after this feature was added	THEN Both who created it and who last updated it show up, each with their own timestamp.
IF A Costing or Quotation has ever been Approved, Rejected, or Declined	THEN Every one of those decisions appears here — not just the most recent one — since each record keeps its own full approval history.

Settings

Admin-managed dropdown lists and configuration used throughout the CRM.

Section	Controls
Lead sources / Industries / Lost reasons / Campaign channels / Sales Persons	Dropdown option lists used across forms
Document destination folders	The Google Drive folder link shown for each supplier document type, and for Customer PO Files
Quotation series	Review and repair quote-number counters per department
Manager edit	Whether managers can edit their team's records, department-wide
Company info	Name, address, TIN, contact details shown on every printed document

If this, then that

IF Manager edit is switched off	THEN Managers can still see their whole department's records, but can only edit ones they personally own — same restriction as staff.
IF A document destination folder link is left blank	THEN That document type's "Open destination folder" hint simply doesn't appear anywhere it would normally show — the rest of the field still works.
IF Company info fields are updated	THEN Every future printed Quotation, Sales Order, and Report picks up the new details immediately — nothing needs republishing.
